Evaluation Photo Diary of Alexandra Fratti of Europlanet Summer School 2018
1. This is the picture I made to explain to the kids I teach what I was doing here. When I started – I didn’t know anything
2. Hans’s lecture [public lecture on exoplanets] made me cry
4. Seeing the galaxy every day. Where I live, we can’t see it.
5. First time of observations in the dome – everyone smiling and not even noticing that I’m taking a picture. We got to open the telescope. This is how I imagine seeing my students when they grow up.
6. Pedro Russo – knows how to be a communicator and what the public wants to hear. Tells you what you want to hear if you are not a scientist.
People helping us and helping each other. Thanks to Cristina for explaining again and again.
8. Coffee break – a big part of school is recess. All the adults outside were children again, playing and laughing and talking about what they like. It captures the summer school spirit.
9. I didn’t know what a spectrum is and Arnas explained and explained and explained...
10. These people are so passionate about what they do. Being an astronomer is the ideas that they have about their field and about life.
