Research Infrastructure

# Europlanet Research Infrastructure Meeting (ERIM) 2023

Anita Heward

# Background

- In 2023, EPSC will be held jointly with DPS in Austin, Texas, US (joint meeting postponed from 2022 in London, Ontario)
- Even with the extension, EPSC2024 will take place after the end of the Europlanet 2024 RI project
- The Europlanet Society will have no income in 2023 without EPSC

# Objectives

- Provide a Europe-based opportunity for the planetary community to gather in 2023 for:
  - Networking
  - Key community events (e.g. Europlanet General Assembly)
  - Expansion of the Europlanet 2024 RI user community
  - Training
  - Widening participation
  - Building new partnerships and collaborations

# Structure

- The Europlanet Research Infrastructure Meeting (ERIM) will be an umbrella event, bringing together :
  - Workshops
  - Community events
  - Networking/social events

# Euromlanet 2024 RI workshops

- Industry
- Widening participation
- Outreach training
- Education
- Amateur astronomers
- TA facilities
- VA user workshops

# Other Europlanet workshops

- Europlanet Early Career (EPEC) Annual Week
- Regional Hub Meeting(s)
- Diversity, Equality and Inclusion
- Distributed Research Infrastructure Meeting
- Europlanet General Assembly
- Keynotes?

# Logistics

- The ERIM 2023 needs to be clearly distinct from the DPS-EPSC Joint Meeting 2023:
  - Timing for June (when EPEC Annual Week traditionally takes place)
  - Held in an Under Represented State
  - Need one large plenary room, multiple workshop rooms >> more suited to a university venue
  - Registration to cover organisation and catering, reimbursed by RI

# Next steps

- Convene organising committees
- Scope out events to be held under umbrella
- Call for venues

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 871149.

# Thank you!
